

INTRODUCING PREDICTIVE

The latest from TisaLabs: A Unified Security and Observability Platform for advanced threat detection and faster incident response.

Predictive equips you with state-of-the-art cybersecurity solutions tailored to fortify your digital ecosystem. With Predictive, you can take a proactive stance in shielding your organization against cyber threats, assuring the ongoing security of your systems and data.

Key Benefits

- **Enhanced Security Posture:** By proactively identifying vulnerabilities and security weaknesses, Predictive strengthens your overall security, reducing the risk of cyberattacks and data breaches.
- **Efficient Vulnerability Resolution:** Predictive streamlines vulnerability management, making it easier and faster to uncover and resolve vulnerabilities while providing real-time insights.
- **Comprehensive Supply Chain Security:** It assists in assessing and managing security risks associated with third-party vendors, ensuring end-to-end supply chain security.
- **Cybersecurity Culture:** Predictive promotes a culture of cybersecurity awareness and good practices through user education.
- **Regulatory Compliance:** By helping you meet regulatory and compliance requirements, Predictive safeguards you from potential fines and reputation damage.

Predictive delivers a comprehensive range of cybersecurity tools, including audits, monitoring, hygiene checks, and user awareness. This provides organisations with the assurance and confidence that their digital assets are secure, offering peace of mind.

The Problem

Today's digital ecosystem—crucial for both businesses and individuals—is facing increasing challenges to the security and integrity of web applications and the servers that host them. Online CMS platforms like WordPress, e-Commerce systems like Shopify, and other PHP-based platforms and web applications fall victim to common and dangerous vulnerabilities, including malicious SQL Injection, Cross-Site Request Forgery, Authentication Bypass, Stream Injection Attacks, and other costly attacks. In fact, according to Verizon's 2020 Data Breach Investigations Report, Web applications have consistently topped the list of hacking targets and breach vectors.

The related economic cost is staggering: nearly €6,000,000,000,000 per year is lost globally to cyber attacks targeting this sector, according to security research firm Cybersecurity Ventures. This figure captures a multitude of damages, from data loss and intellectual property theft to major business disruptions.

Our Solution

We developed Predictive as a robust and effective response to these challenges. Predictive employs advanced algorithms to proactively scan and monitor these sites in real-time, ensuring that potential breaches are identified and customer data is secured.

With Predictive, businesses can address vulnerabilities before they are exploited. As a cloud-based solution, Predictive is accessible anytime, anywhere, and users need only to subscribe to the specific features they want to use. Once signed up, users immediately and easily can add their digital assets to their Predictive account and start using the tool.

Why

Predictive

Predictive is a security and vulnerability scanning platform from security experts at TisaLabs that identifies and predicts security threats before they happen. Our experienced team is passionate about developing a better way to protect organizations from cyberattacks, and dedicated to safeguarding the digital ecosystem for all.

Pricing and Availability

Our pricing structure is simple and flexible, catering to both individual and organizational users. We offer subscription-based pricing for lower volumes, and for those with more specific requirements, we provide customised pricing options to suit their needs.

Vulnerability Management

- Scan assets for vulnerabilities.
- Use one tool for websites, web apps, Kubernetes, and Docker.
- Access a customized dashboard for insights.
- Integrate with other security tools easily.

Real-time Security Monitoring

- Monitor IT assets for real-time alerts.
- Collect and store logs and data from various sources.
- Customize user-based rules for triggering alerts.
- Customized dashboard and reporting system.
- Easy integration with other security tools.

Cyber Awareness & Hygiene

- Educate users and promote good cybersecurity practices.
- Identify process gaps and drive best practices.
- Offer certifications.
- Self-paced learning with online training materials.
- Benchmark using CIS Benchmarks.
